What's inside Life Learning

11 Always Learning Carlo Ricci

Learning to respect and trust a young child's ability to learn from life

17 Homeschooling Our Children, Unschooling Ourselves Alison McKee

A former teacher learns from her mistakes as she and her husband help their son learn independently

23 Yesterday Wayne Swanson

Being open to learning from a child's innocence and imagination

24 Birthing Our Selves, Our Children and Our World Amy Childs

Parents need support to work through the often painful transition to a life of learning

28 What Really Matters? John Taylor Gatto

Asking ourselves what a good life and a good education should be about

30 Talking About Life Learning Sandra Rakovac

The first of a series of interviews with unschooling families

32 Children Are Only Human Jan Fortune-Wood

Why and how to avoid categorizing and stereotyping children

36 Can I Say No to a Strong Willed Child? Naomi Aldorf

Preventing clashes of wills with clear parental leadership

39 Grown Without Schooling Peter Kowalke

When questioning school leads to questioning everything else

44 Life, Learning and Laughter Sandy Lubert

Celebrating our children's choices unconditionally

Always Learning

Respecting young children's ability to learn from life

Carlo Ricci

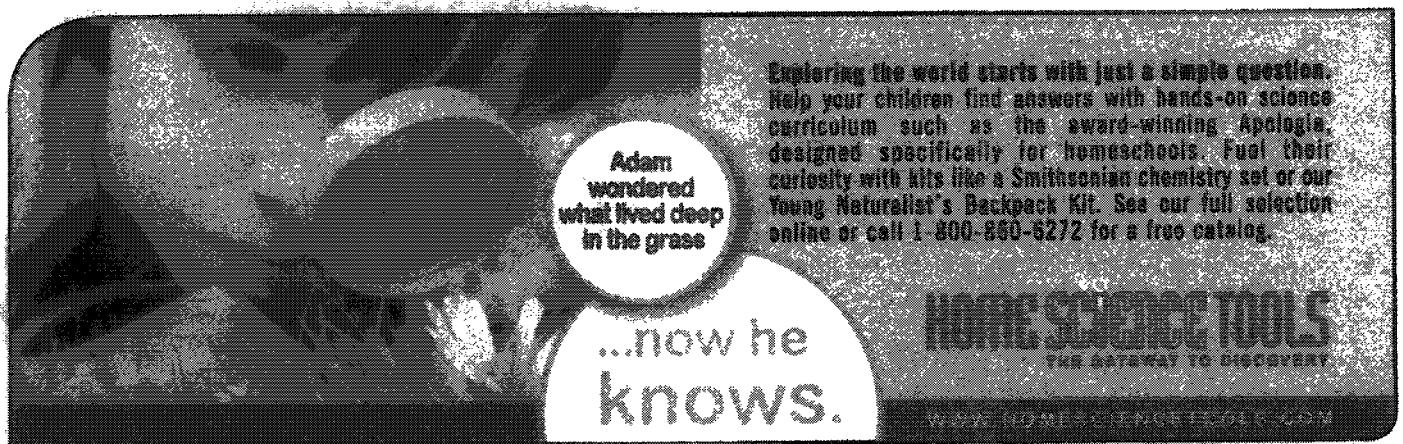

How old do children have to be before they can begin unschooling? The answer to this question is simple: Now. As soon as you are fortunate enough to discover this alternative way of life, it is the right time.

Part of what may motivate someone to ask this question is the word "schooling" contained within the word "unschooling." This is why I prefer the term that was coined as the name of this magazine: "life learning." If we replace the term "unschooling" with "life learning" the question is no longer logical. The question "How old do children have to be before they can begin life learning?" automatically elicits the response

of "they always have been" or at least "now."

I believe life learning is a way of life, a philosophy of existence. In its simplest terms, it is a learner-centered democratic

"Life learning is a way of life...a learner-centered democratic approach to life... a wholistic term that respects an individual's body, mind and spirit."

approach to life. To clarify, I am using the terms “learner centered” and “democratic” in a way that Jerry Mintz of the Alternative Education Resource Organization (AERO) did in an interview on Radio Free School in 2004. Jerry defined learner centered education as “an ap-

proach that is based on the interest of the student rather than curriculum driven, where someone else has the idea of what you ought to be learning,” and he defined democratic education as “education where students are actually empowered to make decisions about their own education and, if they are in a school, about their own school.”

“On a number of occasions, my daughter has taught me that I was wrong and she was right. She has helped me understand that she knows her potential and her capabilities better than I. And she is more capable than I of gauging what she can and cannot do.”

ing. One big area is whether to school our daughters. I am totally against schooling and my wife is reservedly for it; fortunately, ultimately we both agree that the decision needs to be our daughters’. Again, this is life learning. I believe that children are capable of making

sophisticated decisions and need the respect and belief that their decisions matter. They need to feel empowered and respected for the human beings that they are. Are they going to make mistakes? Of course; as I said, making mistakes is an important part of life learning. We adults can share our thoughts, but children need to be listened to also.

“Life learning” is a wholistic term that respects an individual’s body, mind and spirit. To this end, life learning is not a recipe that one has to follow, but it is a process that differs from situation to situation. In what follows I am going to share what life learning means to me in connection to what I have learned from my daughters.

On a number of occasions my daughter has taught me that I was wrong and she was right. She has helped me understand that she knows her potential better than I do, that she knows her capabilities better than I do and, perhaps most importantly, that she is more capable than I of gauging what she can do and what she cannot do.

First, I need to say that I feel that I have made mistakes as a parent, but I believe that this is okay. Part of life learning is that we are always unfinished and therefore grow and learn throughout life. I believe there is a danger in believing that we are not continuing to learn and grow. Admitting and recognizing our mistakes and sharing them with others is an important part of life learning.

Allow me to share several examples. When my daughter was younger and we would go to our local park, I would bring her to the smaller slide. She quickly mastered climbing and sliding down on her own. One day she told me that she wanted to tackle the larger slide on her own. I immediately shouted, “No! It is too high up and you will fall and hurt yourself.” Fortunately, I shouted this to myself and not out loud to her. What I said to her was, “Do you think you can do it on your own?” She responded, “Yes.” I nervously watched her skillfully climb

My wife and I share a lot of life learning assumptions and struggle with trying to better understand those that we do not share. Again, this is a part of life learn-

down the slide without incident. After she did this a few times I realized that there was nothing for me to worry about and my reaction was unnecessary.

Recently, our park has been redesigned and a similar thing happened. This time she asked to go up a difficult ladder that has a rope to assist the children climb. It is clearly intended for older children. You would think that after all this time I would react in a more trusting way, but again I inwardly reacted in a fearful way while outwardly asking her the same supportive question: “Do you think you can do it?” Again she said she could. Off she went. After about several steps she realized that it was harder than she had thought, so she simply called me to come and help her. I did, and after a few weeks she was capable of doing it on her own.

From this, I learned that children are capable of determining what they are capable of doing and if they find that they cannot they will ask for help. Secondly, I feel that it is my duty to help when she asks for it and not before. When I forget, my daughter is very firm about reminding me that she can do it on her own. On a number of occasions she has verbally and rather violently insisted that I stop doing what I am doing and immediately leave the task to her. For example, I recall when she was younger and wanted to fill her sippy cup with water. I lovingly took it from her and proceeded to unscrew the lid so that I could fill it for her. She quickly had an outburst that I at first thought was an overreaction on her part. However, the more I thought about it, the more I concluded that her reaction was appropriate. She needs to do it for herself. She needs to learn how to do it. And my interference limits her learning and growth.

My daughter has reacted the same way when, upon seeing her struggle with getting dressed, I have tried to help her put her clothes or boots on. Again, by doing this I am thinking that I am being helpful, but what I am really doing is interfering in her learning and growth. I am convinced that she would not be as skilled and confident at doing what she does if I had not understood the importance of not helping unless she asks for help. And even when she does ask for help, I have learned that I need to help as

“She has a real hammer that is a smaller version of my hammer and she banged away as best she could...She learned about measuring tapes, hammers, nails, the importance of numbers, the value and need for money and much more.”

minimally as possible and do only what she asks and no more. Again, the more I do the less she does.

Life learning also means ignoring the

sorts of messages from our environment all the time.”

Here are some more examples from my daughter’s life of what this means for

discovered that we did not know what type of wood we needed. We went home, researched it, discovered it was cedar and went back to purchase the replacement, had them cut it to size, came home and nailed it in place.

My daughter has a real hammer that is a smaller version of my hammer and she banged away as best she could. Remember, she was just over two years old at the time. I will not disrespect the situation by fragmenting the learning that happened in terms of a schooling curriculum because I truly believe that does not matter. What matters is that we were life living and therefore life learning. If what we learned fits into what schools arbitrarily value, that is immaterial.

I do, however, want to add that I believe the learning that resulted from this life experience was so deep because she embodied it and because it was genuine. She learned about measuring tapes, hammers, nails, the importance of numbers, the value and need for money and so on.

After the board was in place, it was time to prepare and paint the deck. She was very helpful when it came time to clean the deck. As I scrubbed, she hosed it down. Nothing, and I mean nothing, would have kept her away from helping with the painting. So, she dressed in her smock and away we went.

Some have commented on allowing our daughter to use real nails, a real hammer and allowing her to paint the deck. The truth is that she was never in danger and you cannot tell the part that I painted and the part that she painted. Incidentally, this may say as much about my painting skills as it does hers.

Admittedly, the whole process took a

“Living is learning. It is impossible to be alive and conscious (and some would say unconscious) without constantly learning things. If we are alive we are constantly

receiving various sorts of messages from our environment all the time.” John Holt

practice of fragmenting subjects made popular by schooling, and instead having children learn life as they live life. My favorite insight into what is learning comes from one of my favorite educational thinkers: John Holt. In his book *Learning all the Time* (Da Capo Press, 1989) he wrote, “Living is learning. It is impossible to be alive and conscious (and some would say unconscious) without constantly learning things. If we are alive we are constantly receiving various

my understanding of life learning.

The Rotting Board

The first example took place last summer. One board on our deck was rotted out. I decided it was time to change it and my daughter decided she wanted to help. So we both went out, used a crow bar to remove the old piece of board, got a measuring tape to see what size the replacement board had to be, went to the lumber store to buy the replacement and

Does Your Child Need Academic Help?

Using Merit Software will improve your child's reading, writing, and math skills. We guarantee it.

MERIT Software
Because you want results!

- **Proven, interactive, and engaging exercises** build your child's core competencies.
- **Self-paced lessons with guided support** challenge your child at the right level.
- **Personalized tips and feedback** help your child learn faster than with traditional methods of instruction.
- **An easy-to-use tracking system** allows you to measure your child's progress.

lot longer than it would have if I had done it by myself; however, it would not have been as enjoyable and rewarding. As well, my daughter's presence forced me to be more mindful. I was much more careful and aware of the present dangers. For example, as we removed the old board I did not simply throw it aside; we made sure that we removed all of the nails so that there was no chance of us getting hurt. I also covered the hole where I removed the board so that we would not accidentally fall in.

In saying that it would have been faster, I am not implying that my daughter was not a genuine help, because she was. On one occasion, I asked if she wouldn't mind going inside and getting the broom and dust pan. She came back with my broom and dustpan as well as hers. She helped me sweep and keep our work area clean.

On another occasion she warned me that there was a nail that we should discard. On yet another, she turned off the hose while I was busy doing other things. In short, the next time I have to change a board, I hope she will agree to help.

The next example happened a few months ago when my wife went out the door and to her surprise ended up with a cracked storm door handle in her hand. Again, my daughter helped us throughout the whole process. She skillfully worked the screwdriver until she got the screws out and so on until the handle was replaced.

Similarly, when our faucet needed to be replaced she was a ready and willing helper. I will not go into the details because I believe that the point has been made. Whether it is cooking, cleaning,

repairing, gardening, bathing and on and on, my daughters are ready and willing to help in any way that they can.

Taking the Time To Hug the Trees

Another important part of life learning is mindfulness or being in the moment. I am often reminded of this by both of my daughters. When we go out for our

my neighbors witness my tree hugging they do not question it because they connect my behavior with appealing the children. I often wonder why I would not hug a tree without my children around. What other wonderful things do we miss out on, just because we are now adults?

This is not a complete description of what life learning means to me, nor is it intended to be. Part of what I wanted to do was to share my commitment and re-

"My daughters remind me that the faster you go, the more you miss. When we go for our walks we need to greet the trees, watch the ants and explore whatever catches our attention."

walks, speed is not how I would characterize the walks, nor would I have it any other way. My daughters remind me that the faster you go the more you miss. When we go for our walks we need to greet the trees, watch the ants and explore whatever catches our attention. I had forgotten how great it feels to hug a tree. Having young children around is great because on the few occasions when

solve about the value in life learning for all age groups. Like many who have shared their experiences and successes with life learning, I want to stand side by side with these pioneering heroes who live life learning. Whether it is in making mistakes, doing daily activities or simply being mindful, the power and value in life learning needs to be respected. - LL -

Software and books designed for self-directed learning

- ★ **Spelling Mentor** - Includes audio pronunciations! Word lists available for US National Spelling Bee preparation or for difficulty levels ranging from early elementary to high school. Download a sample on our website.
- ★ **Etyma Mentor** - Learn Latin and Greek roots and elements. Books accompany software. Three levels available.
- ★ **Mental Math Mentor** - Teaches mathematical short cuts and tricks so that calculations from multiplication to square roots can be performed mentally. Book accompanies software.
